WhatsApp Contact List Manager

Clean, format and de-duplicate phone numbers. Everything stays on your device.

Format check only. A number marked "valid format" looks like a real phone number. It does **not** mean the number is registered on WhatsApp. This tool never contacts WhatsApp or any server.

Private by design: numbers are processed in this browser tab and never uploaded, sent or saved. Closing or clearing the page erases them.

1. Add numbers

Default country code

United Kingdom (+44)

Used for numbers without a + or 00 prefix. Example: 07911 123456 becomes +44 7911 123456 when the UK is selected.

Paste numbers (one per line, or separated by commas)

07911 123456
+44 20 7946 0958
(415) 555-2671

Choose CSV or text files
